DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12 and 18-21, drawn to a phase-locked loop for producing sampling point for high speed serial data having a clock and data recovery module, a charge pump, a loop filter, a voltage oscillator, and adjusting circuitry for adjusting the error current to cause feedback signal to be phase adjusted.
 - II. Claims 13-17, drawn to a phase detection module having a leading edge detector, a charge pump, and adjustment circuitry for selectively sinking current.

2. The inventions are distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, Group I drawn to a phase-locked loop having a clock and data recovery module, a charge pump, a loop filter, a voltage oscillator and Group II has a separate utility such as a phase detection module having a leading edge detector, a charge pump, and adjustment circuitry for selectively sinking current. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their recognized divergent subject matter and different searches are required for each group.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
6. During a telephone conversation with Mr. Justin Liu (Reg. No. 51,959) on March 29, 2006, a provisional election was made without traverse to prosecute the invention of Group I, claims 1-12 and 18-21.

Examiner's Amendment

7. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
8. Authorization for this examiner's amendment was given in a telephone interview with Mr. Justin Liu (Reg. No. 51,959) on March 29, 2006.

The application has been amended as follows:

Claims 13-17 have been canceled.

Allowable Subject Matter

9. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 1 and 18, the prior arts of record, in combination or individual, fail to show or make it obvious a phase-locked loop for producing sampling point for high speed serial data having associated circuitry of a clock and data recovery module, a charge pump, a loop filter, a voltage oscillator, and wherein the charge pump includes an adjusting circuitry for adjusting the error current to cause the feedback signal to be phase adjusted to a desired point within a period of each bit of the high speed serial data. Claims 2-12 and 19-21 are dependent claims, respectively

10. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
